

SEO Opportunity Diagnostic — Apple Imprints

Prepared for Apple Imprints · appleimprints.com · Report date 2026-09-13

Public-web research and direct page observation on customer-owned pages. Goal: more sales-revenue. This is an evidence-led decision report; nothing is guaranteed.

Executive Summary — Highest-Value Decisions

Finding 1 — *No minimum-order, price, or turnaround information on the screen-printing service page, so a comparison-minded buyer cannot pre-qualify their order.* [VALIDATE FIRST]

Customer page: <https://appleimprints.com/screen-printing/>

Direct observation: Page describes methods (spot color, four-color process, simulated process, specialty printing) but shows the heading and method names repeatedly across the page; page does not state any minimum order quantity, any price range, any per-piece price, or any turnaround time anywhere in the visible text. CTA is the global 'Get a Quote' nav link.

Buyer question: How many pieces must I order and roughly what will screen printing cost me before I contact you?

Specific gap: No minimum-order, price, or turnaround information on the screen-printing service page, so a comparison-minded buyer cannot pre-qualify their order.

Business mechanism: The buyer question 'minimums + price' is a pre-sales qualification step; a page that omits it forces every visitor to submit a quote form before they can even self-qualify, which filters out smaller or price-sensitive buyers and lowers the pool of qualified enquiries that reach the goal (more sales-revenue).

Recommended change (module): Add a 'Pricing & Minimums' section to this exact screen-printing page

Reason accepted by auditor: Adds pre-sales qualification info, reducing quote form friction.

Finding 2 — *Quote page collects contact details but gives no post-submission expectation, no proof/reference, and no reason for a wary first-time buyer to trust a small shop.* [VALIDATE FIRST]

Customer page: <https://appleimprints.com/get-a-quote-2/>

Direct observation: Quote form is present ('First Name * Last Name * Email Address * Phone') with the line 'Within 24 hours or less! If rush is needed, please call us!' There is no statement describing what happens after submission, no reference to any past work/proof, and no expectation-setting about the next step, pricing, or samples.

Buyer question: After I submit this form, what happens next and why should I trust Apple Imprints to do my order?

Specific gap: Quote page collects contact details but gives no post-submission expectation, no proof/reference, and no reason for a wary first-time buyer to trust a small shop.

Business mechanism: Trust is a decision-stage blocker for a small, lesser-known decorator; a quote page that sends no trust signal makes hesitant first-time buyers more likely to abandon rather than submit the form, directly suppressing quote submissions that drive the goal (more sales-revenue).

Recommended change (module): Add a 'What happens next' 3-step trust/process explainer with a proof link, under the quote form

Reason accepted by auditor: Builds trust by clarifying post-submission process.

Finding 3 — *Gallery images are unlabelled so a decoration buyer cannot map a completed piece to the service they are considering, and the page does not feed the relevant service page or quote page.* [DO NOW]

Customer page: <https://appleimprints.com/gallery/>

Direct observation: Gallery page exists with heading 'Our Works' and text 'browse our gallery of completed orders that have satisfied...' but it is a single image wall with no captions, no per-item service/technique tag, no link back to the matching service pages, and no testimonial text or case detail.

Buyer question: Which of these pieces were done with screen printing vs embroidery, and can I see a completed example of my specific project type?

Specific gap: Gallery images are unlabelled so a decoration buyer cannot map a completed piece to the service they are considering, and the page does not feed the relevant service page or quote page.

Business mechanism: Proof works only if a buyer can connect it to their intended service; unlabelled, un-linked gallery images do not build that connection, so the trust/proof asset fails to move evaluation-stage buyers toward the quote, limiting the goal (more sales-revenue).

Recommended change (module): Add captions/technique tags to the first 12 priority gallery items and link each to its service page and the quote form

Reason accepted by auditor: Links gallery proof to services, aiding buyer decisions.

Finding 4 — *No method-selection guidance or comparison on the homepage, so a first-time business buyer cannot match their order to the right service and instead faces a generic quote form.* [VALIDATE FIRST]

Customer page: <https://appleimprints.com/>

Direct observation: Homepage presents five decoration-method cards (Screen Printing, Embroidery, Debossing, DTG, DTF) followed by an ABOUT US section, but gives no guidance a first-time buyer can use to choose which method fits their project and quantity; every method card routes to the same generic Get a Quote nav link rather than to the relevant service page, so a first-time buyer cannot self-route.

Buyer question: Which of these decoration methods fits my project and quantity, and how are they different?

Specific gap: No method-selection guidance or comparison on the homepage, so a first-time business buyer cannot match their order to the right service and instead faces a generic quote form.

Business mechanism: An awareness/evaluation buyer arrives with a need for custom apparel but no method knowledge; without a method-selection aid that maps project type and quantity to a technique, the buyer stalls on the homepage instead of progressing to the relevant service page and then to the quote, suppressing qualified enquiries toward the goal (more sales-revenue).

Recommended change (module): Add a Which method is right for your project selection aid on the homepage, with quantity and project questions that route each answer to the relevant service page and quote form.

Reason accepted by auditor: Guides first-time buyers to the right service method.

Finding 5 — *Embroidery page gives no on-page proof, no gallery cross-link, and no minimum/price/turnaround guidance, so an evaluation-stage buyer cannot judge quality or pre-qualify.* [VALIDATE FIRST]

Customer page: <https://appleimprints.com/embroidery/>

Direct observation: Embroidery page is marketing prose (Timeless, Professional Appearance; Embroidery adds a classic, high-end look) with no example or proof image on the page, no link to the gallery showing embroidered work, and no minimum or price or turnaround context. A buyer evaluating embroidery cannot see an Apple Imprints embroidered example without leaving the page.

Buyer question: Can I see an embroidered example, and roughly what does embroidery cost and what is the minimum?

Specific gap: Embroidery page gives no on-page proof, no gallery cross-link, and no minimum/price/turnaround guidance, so an evaluation-stage buyer cannot judge quality or pre-qualify.

Business mechanism: Proof and pricing-lite are the evaluation-stage inputs; an embroidery page with zero proof and no gallery link fails to move a quality-conscious buyer toward the quote, so it underconverts for the goal (more sales-revenue).

Recommended change (module): Add on-page embroidery example image(s) plus a link to the gallery proof and a Get an exact quote route on the embroidery service page.

Reason accepted by auditor: Adds proof and pricing-lite to move buyers forward.

Implementation brief — ACT-001 (EC-001)

OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: Sales/Operations must approve the exact MOQ, per-color setup fee, and turnaround window before publish. Do not commit any specific number that is unconfirmed.

Exact placement: Insert a 'Pricing & Minimums' block immediately after the 'Specialty Printing' method list and before the final 'Get a Quote' CTA, on the screen-printing service page.

Owner confirmation questions:

1. What is the current minimum order quantity?
2. Does a setup/digitisation fee apply, and how is it charged?
3. Which variables determine customer price (quantity, ink colors, print locations, blank garment cost)?
4. What is the normal turnaround range?
5. What rush-order policy can be promised publicly?
6. What response-time SLA can be promised publicly for quotes?

Required page-module fields:

- Minimum-order policy
- Price-factor explanation
- Setup-fee policy
- Standard turnaround
- Rush-order handling
- Exact quote CTA

Approved-copy placeholder: [Insert Sales/Operations-approved wording before publication.]

CTA destination: <https://appleimprints.com/get-a-quote-2/> (existing quote form) with text 'Get an exact quote'.

QA requirements: Verify on mobile (form stacks) and desktop (pricing table does not overflow) after publish.

Baseline & review criteria: Record quote-form submissions and session count on this exact page for 14 business days before the change.

Scale rule: A pattern can expand from screen-printing-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Implementation brief — ACT-002 (EC-002)

OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: The 'one business day' response-time claim must be approved by the owner/service manager before publish; do not restate an unconfirmed SLA.

Exact placement: Render the 3-step explainer BELOW the quote form fields and ABOVE the 'Within 24 hours' line, so it does not push the form off the first screen on mobile.

Three post-submission steps:

1. Step 1 — 'We review your order within one business day.'
2. Step 2 — 'We reply with an exact quote, a proof, and a timeline for your design.'
3. Step 3 — 'Approve the proof and we start production; rush is available by phone.'

Owner confirmation questions:

1. What response-time SLA can be promised publicly for quotes?
2. Which post-submission expectations can the owner publicly promise?
3. Can the gallery be linked as proof of completed work?

Required page-module fields:

- Response-time result (e.g. 'we reply within one business day')
- Post-submission steps
- Proof link
- Exact quote CTA

Approved-copy placeholder: [Insert Sales/Operations-approved wording before publication.]

CTA destination: <https://appleimprints.com/get-a-quote-2/> (the form itself).

Trust/proof route: Link the words 'completed orders' to <https://appleimprints.com/gallery/> as visible proof.

QA requirements: Mobile: form fields remain above the fold; Desktop: 3-step block renders inline without overflow; proof link opens /gallery/.

Baseline & review criteria: Record form-start and form-submit rate for 14 business days before the change.

Scale rule: A pattern can expand from quote page-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Implementation brief — ACT-003 (EC-003)

OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: Content owner writes captions; production lead (service owner) confirms each item's actual technique before the tag is published.

Exact placement: On the gallery page, add a caption + technique tag under each of the first 12 priority images and a 'Get a quote for a similar piece' link; each caption links to the matching service page and to the quote form.

Owner confirmation questions:

1. Can the first 12 gallery items be publicly captioned and tagged?
2. Which service page should each item link to (screen/embroidery/DTG/DTF/debossing)?
3. Can the gallery link to the quote form as 'Get a quote for a similar piece'?

Required page-module fields:

- Caption taxonomy (technique + item type)
- Technique-to-service-page mapping
- Quote CTA route

Approved-copy placeholder: [Insert approved caption/tag copy before publication.]

CTA destination: <https://appleimprints.com/get-a-quote-2/> ('Get a quote for a similar piece').

Trust/proof route: screen-printing via /screen-printing/; embroidery via /embroidery/; DTG via /direct-to-garment-dtg/; DTF via /direct-to-film-dtf/; debossing via /debossing/.

QA requirements: Mobile + desktop: captions wrap, links resolve, images do not reflow; every tagged item links to the correct service page and quote route.

Baseline & review criteria: Record gallery-to-quote link clicks and session count on the gallery page for 14 business days before the change.

Scale rule: A pattern can expand from gallery-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Implementation brief — ACT-004 (EC-004)

OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: Sales/Operations must approve the method-to-project routing before publish.

Exact placement: Insert the method-selection aid between the hero and the method cards on the homepage.

Owner confirmation questions:

1. Which decoration method maps to which project type and quantity?
2. Can each method answer route to the matching service page and quote form?

Required page-module fields:

- Method-selection aid
- Quantity/project questions
- Route-to-service-page links
- Exact quote CTA

Approved-copy placeholder: [Insert Sales/Operations-approved method-routing wording before publication.]

CTA destination: <https://appleimprints.com/get-a-quote-2/> (quote form) routed from each method answer.

QA requirements: Verify on mobile (aid stacks) and desktop (no overflow) after publish; every route link resolves.

Baseline & review criteria: Record homepage to service-page and homepage to quote clicks for 14 business days before the change.

Scale rule: A pattern can expand from homepage-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Implementation brief — ACT-005 (EC-005)

OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: Sales/Operations and Production Lead must confirm the example and any minimum/price/turnaround before publish.

Exact placement: Insert below the Timeless, Professional Appearance intro and above the footer CTA on the embroidery page.

Scope note: ACT-005 scope: embroidery proof image, gallery cross-link, and the embroidery-specific quote route ONLY. Pricing / minimum / turnaround information is deferred until the ACT-001 owner-approved pricing-information pattern has been validated and can be adapted for embroidery; ACT-005 must NOT duplicate the ACT-001 pricing action.

Owner confirmation questions:

1. Which embroidered piece can be shown as public proof?
2. What minimum, price factors and turnaround can be promised publicly for embroidery?
3. Can the gallery be linked as embroidered proof?

Required page-module fields:

- Example proof image
- Gallery proof link
- Embroidery-specific quote route

Approved-copy placeholder: [Insert Sales/Operations-approved embroidery wording before publication.]

CTA destination: <https://appleimprints.com/get-a-quote-2/> (quote form) with text Get an exact embroidery quote.

QA requirements: Mobile and desktop: example image renders, gallery link resolves, no text clipped.

Baseline & review criteria: Record embroidery-page to quote clicks and session count for 14 business days before the change.

Scale rule: A pattern can expand from embroidery-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

First 7-Day Win

ACT-003 — Add captions/technique tags to the first 12 priority gallery items and link each to its service page and the quote form

Single customer page: <https://appleimprints.com/gallery/>

Why this is the First 7-Day Win: it is low-risk and reversible, targets a single customer-owned URL (<https://appleimprints.com/gallery/>), needs none of the unconfirmed MOQ / setup-fee / turnaround / SLA figures, tests with the first 12 gallery examples only, and directly improves the proof → service → quote journey for the goal (more sales-revenue). See Implementation Brief EC-003 for the full brief.

What Not To Prioritise Yet

For Apple Imprints specifically, the evidence does not yet justify spending on: (1) a paid link-building campaign, (2) a redesign of the whole site, (3) a new online store, or (4) expanding gallery tagging beyond the first 12 items — the three customer-owned page gaps documented here (pricing/minimums on screen-printing, trust/expectation on the quote form, labelled proof on the gallery) are cheaper and higher-leverage first.

Commercial Opportunity Model

Value lever: demand capture + page clarity. **Publicly observable evidence:** the three customer-owned pages (screen-printing service page, quote page, gallery) currently omit price/minimum/turnaround, post-submission expectation and labelled proof — the documented gaps in the evidence cards. **Client data required to quantify upside:** quote-form submissions, CTA clicks, lead/order rate (GSC/GA4 when the owner provides access). Any effect is an assumption to be measured, never a forecast guarantee; no revenue figure is claimed.

Investment Decision Matrix

DO NOW

- ACT-003 — Add captions/technique tags to the first 12 priority gallery items and link each to its service page and the quote form (on <https://appleimprints.com/gallery/>)

VALIDATE FIRST (pending owner approval)

- ACT-001 — Add a 'Pricing & Minimums' section to this exact screen-printing page (on <https://appleimprints.com/screen-printing/>); requires owner confirmation before publication.
- ACT-002 — Add a 'What happens next' 3-step trust/process explainer with a proof link, under the quote form (on <https://appleimprints.com/get-a-quote-2/>); requires owner confirmation before publication.
- ACT-004 — Add a Which method is right for your project selection aid on the homepage, with quantity and project questions that route each answer to the relevant service page and quote form. (on <https://appleimprints.com/>); requires owner confirmation before publication.
- ACT-005 — Add on-page embroidery example image(s) plus a link to the gallery proof and a Get an exact quote route on the embroidery service page. (on <https://appleimprints.com/embroidery/>); requires owner confirmation before publication.

DEFER / DO NOT PRIORITISE YET

For Apple Imprints specifically: do not spend on a paid link-building campaign, a full site redesign, a new online store, or expanding gallery tagging beyond the first 12 items until the customer-owned page changes above are proven. No competitor action, external links, or redesign is part of this 90-day plan.

Customer Journey Map

Buyer stage	Customer-owned page	Observed friction	Action ID	Intended first signal
Service evaluation	/screen-printing/	price/minimum/turnaround clarity missing	ACT-001	quote-form submissions / CTA clicks on the screen-printing page
Proof / evaluation	/gallery/	unlabelled proof, no service mapping	ACT-003	gallery-to-quote link clicks
Quote conversion	/get-a-quote-2/	unclear next-step and proof route	ACT-002	form-start / form-submit rate
Method selection (awareness)	/	no method-selection guidance, generic quote CTA	ACT-004	homepage-to-service-page and homepage-to-quote clicks
Embroidery evaluation	/embroidery/	no on-page proof, no gallery link, no minimum/price context	ACT-005	embroidery-page-to-quote clicks
Sales follow-up	internal workflow / owner-confirmation item	data needed before performance assessment	—	owner-supplied order/quote data

90-Day Execution Roadmap

Days 0-7: ACT-003 gallery pilot for the first 12 examples (DO NOW, no owner-confirmed figures required).

Days 8-30: Collect owner-approved policy/process inputs for ACT-001 (MOQ, price factors, setup fee, turnaround), ACT-002 (response-time SLA, quote process) and ACT-005 (example image, minimum/price/turnaround); prepare draft modules; record baselines for all five pages.

Days 31-60: Publish approved ACT-001 and ACT-002 and ACT-005 modules (VALIDATE FIRST, owner-approved copy only); measure page CTA / form behaviour; keep ACT-003 and ACT-004 live (DO NOW).

Days 61-90: Review every page against its 14-day baseline; extend only the proven pattern (per each action's scale rule); do not spend on deferred work (paid links, redesign, new store, full-gallery tagging) unless the evidence supports it.

Top Priority Actions

ACT-001 — Add a 'Pricing & Minimums' section to this exact screen-printing page

Primary customer URL (single): <https://appleimprints.com/screen-printing/>

Investment status: VALIDATE FIRST

Business mechanism: The buyer question 'minimums + price' is a pre-sales qualification step; a page that omits it forces every visitor to submit a quote form before they can even self-qualify, which filters out smaller or price-sensitive buyers and lowers the pool of qualified enquiries that reach the goal (more sales-revenue).

Definition of done: QA-pass on the live customer page <https://appleimprints.com/screen-printing/>: the Add a 'Pricing & Minimums' section to this exact screen-printing page module renders and its links work on mobile and desktop, the page passes a content check by the approver (Sales/Operations) and QA by Web/Developer, and no text is clipped. See Implementation Brief ACT-001 for complete requirements.

First measurable signal: exact quote CTA click rate and quote-form start on the screen-printing page

Scale rule: A pattern can expand from screen-printing-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Review window: 30-60 days

Approver: Sales/Operations

Content owner: Content/Marketing

Publisher / QA: Web/Developer

Effort: Medium

Approval dependency: OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: every MOQ number, price factor, per-color setup fee and turnaround day must be confirmed by the Apple Imprints owner before any copy is published. Nothing below is confirmed fact.

ACT-002 — Add a 'What happens next' 3-step trust/process explainer with a proof link, under the quote form

Primary customer URL (single): <https://appleimprints.com/get-a-quote-2/>

Investment status: VALIDATE FIRST

Business mechanism: Trust is a decision-stage blocker for a small, lesser-known decorator; a quote page that sends no trust signal makes hesitant first-time buyers more likely to abandon rather than submit the form, directly suppressing quote submissions that drive the goal (more sales-revenue).

Definition of done: QA-pass on the live customer page <https://appleimprints.com/get-a-quote-2/>: the Add a 'What happens next' 3-step trust/process explainer with a proof link, under the quote form module renders and its links work on mobile and desktop, the page passes a content check by the approver (Owner/Service Manager) and QA by Web/Developer, and no text is clipped. See Implementation Brief ACT-002 for complete requirements.

First measurable signal: quote form-start to quote form-submit completion rate

Scale rule: A pattern can expand from quote page-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Review window: 30-60 days

Approver: Owner/Service Manager

Content owner: Service/Content

Publisher / QA: Web/Developer

Effort: Medium

Approval dependency: OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: the stated response-time ('one business day') and any service promise must be approved by the owner before publish. Nothing below is confirmed SLA copy.

ACT-003 — Add captions/technique tags to the first 12 priority gallery items and link each to its service page and the quote form

Primary customer URL (single): <https://appleimprints.com/gallery/>

Investment status: DO NOW

Business mechanism: Proof works only if a buyer can connect it to their intended service; unlabelled, un-linked gallery images do not build that connection, so the trust/proof asset fails to move evaluation-stage buyers toward the quote, limiting the goal (more sales-revenue).

Definition of done: QA-pass on the live customer page <https://appleimprints.com/gallery/>: the Add captions/technique tags to the first 12 priority gallery items and link each to its service page and the quote form module renders and its links work on mobile and desktop, the page passes a content check by the approver (Production Lead) and QA by Web/Developer, and no text is clipped. See Implementation Brief ACT-003 for complete requirements.

First measurable signal: gallery caption/service-page click and gallery-to-quote click

Scale rule: A pattern can expand from gallery-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Review window: 30-60 days

Approver: Production Lead

Content owner: Content/Marketing

Publisher / QA: Web/Developer

Effort: Small

Approval dependency: OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: the content owner and the production lead must verify each item's actual technique before any tag is published.

ACT-004 — Add a Which method is right for your project selection aid on the homepage, with quantity and project questions that route each answer to the relevant service page and quote form.

Primary customer URL (single): <https://appleimprints.com/>

Investment status: VALIDATE FIRST

Business mechanism: An awareness/evaluation buyer arrives with a need for custom apparel but no method knowledge; without a method-selection aid that maps project type and quantity to a

technique, the buyer stalls on the homepage instead of progressing to the relevant service page and then to the quote, suppressing qualified enquiries toward the goal (more sales-revenue).

Definition of done: QA-pass on the live customer page <https://appleimprints.com/>: the Add a Which method is right for your project selection aid on the homepage, with quantity and project questions that route each answer to the relevant service page and quote form. module renders and its links work on mobile and desktop, the page passes a content check by the approver (Sales/Operations) and QA by Web/Developer, and no text is clipped. See Implementation Brief ACT-004 for complete requirements.

First measurable signal: method-selection completion and homepage method-to-service-page click

Scale rule: A pattern can expand from homepage-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Review window: 30-60 days

Approver: Sales/Operations

Content owner: Content/Marketing

Publisher / QA: Web/Developer

Effort: Medium

Approval dependency: OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: the method-to-project routing after the homepage method-selection aid must be approved by Sales/Operations before any route is published. A DO NOW draft module/layout may be prepared, but its publication and routing rules are VALIDATE FIRST.

ACT-005 — Add on-page embroidery example image(s) plus a link to the gallery proof and a Get an exact quote route on the embroidery service page.

Primary customer URL (single): <https://appleimprints.com/embroidery/>

Investment status: VALIDATE FIRST

Business mechanism: Proof and pricing-lite are the evaluation-stage inputs; an embroidery page with zero proof and no gallery link fails to move a quality-conscious buyer toward the quote, so it underconverts for the goal (more sales-revenue).

Definition of done: QA-pass on the live customer page <https://appleimprints.com/embroidery/>: the Add on-page embroidery example image(s) plus a link to the gallery proof and a Get an exact quote route on the embroidery service page. module renders and its links work on mobile and desktop, the page passes a content check by the approver (Sales/Operations + Production Lead) and QA by Web/Developer, and no text is clipped. See Implementation Brief ACT-005 for complete requirements.

First measurable signal: embroidery proof/gallery click and embroidery-page-to-quote click

Scale rule: A pattern can expand from embroidery-specific evidence only: (1) the relevant click/conversion rate improves versus the recorded 14-day baseline; (2) lead quality does not fall where owner/CRM data is available; (3) there is no operational or customer-confusion issue; (4) the owner approves the expansion decision. If no analytics/CRM data is provided, no scale decision can be made beyond public QA.

Review window: 30-60 days

Approver: Sales/Operations + Production Lead

Content owner: Content/Marketing

Publisher / QA: Web/Developer

Effort: Medium

Approval dependency: OWNER CONFIRMATION REQUIRED BEFORE PUBLICATION: confirm the example image and any minimum/price/turnaround wording before publish.

Source / Evidence Appendix

Card	Customer URL	Direct observation
EC-001	https://appleimprints.com/screen-printing/	Page describes methods (spot color, four-color process, simulated process, specialty printing) but shows the heading and method names repeatedly across the page; page does not state any minimum order quantity, any price range, any per-piece price, or any turnaround time anywhere in the visible text. CTA is the global 'Get a Quote' nav link.
EC-002	https://appleimprints.com/get-a-quote-2/	Quote form is present ('First Name * Last Name * Email Address * Phone') with the line 'Within 24 hours or less! If rush is needed, please call us!' There is no statement describing what happens after submission, no reference to any past work/proof, and no expectation-setting about the next step, pricing, or samples.
EC-003	https://appleimprints.com/gallery/	Gallery page exists with heading 'Our Works' and text 'browse our gallery of completed orders that have satisfied...' but it is a single image wall with no captions, no per-item service/technique tag, no link back to the matching service pages, and no testimonial text or case detail.
EC-004	https://appleimprints.com/	Homepage presents five decoration-method cards (Screen Printing, Embroidery, Debossing, DTG, DTF) followed by an ABOUT US section, but gives no guidance a first-time buyer can use to choose which method fits their project and quantity; every method card routes to the same generic Get a Quote nav link

		rather than to the relevant service page, so a first-time buyer cannot self-route.
EC-005	https://appleimprints.com/embroidery/	Embroidery page is marketing prose (Timeless, Professional Appearance; Embroidery adds a classic, high-end look) with no example or proof image on the page, no link to the gallery showing embroidered work, and no minimum or price or turnaround context. A buyer evaluating embroidery cannot see an Apple Imprints embroidered example without leaving the page.

This report uses public-web research on publicly accessible pages unless otherwise stated; search results change; no outcome is guaranteed. Competitor sites appear only as sources, never as work targets.
